SOFTWARE ENGINEER

Frontend-focused software engineer with 4 years of experience building React/Next.js products, including leading design and frontend for a self-serve product. Brings a strong design sense to turning complex systems into approachable, user-friendly interfaces, and enjoys owning features from design through deployment.

EXPERIENCE

Shipium Denver, CO (Remote)
Software Development Engineer II June 2026 - Present

- Designed and built the React/TypeScript frontend for a self-serve carrier selection product, using progressive disclosure and guided flows to simplify an enterprise configuration model for small shippers
- Rewrote the shipment-simulation pipeline, redesigning batching around Parquet to resolve out-of-memory failures and cut multi-hour runs to under an hour
- Built MCP tooling and a conversational frontend agent that streamlines simulation setup, surfacing only the settings each flow needs instead of a dense, all-options UI

Software Development Engineer I March 2025 - August 2025, January 2026 - May 2026

- Partnered with data science and backend teams to successfully integrate new ML models into the logistics simulation platform, providing more precise analysis of customer fulfillment strategies
- Addressed critical data inconsistencies in the simulation platform by debugging and optimizing queries in DuckDB, guaranteeing accuracy of customer reports

Gartner Austin, TX (Remote)
Software Engineer October 2023 - February 2025
Associate Software Engineer April 2022 - October 2023

- Developed and maintained a forms-as-a-service (FaaS) Next.js application that funnels $100M+ in annual revenue, providing seamless integration and customization for development teams
- Iterated on UX/UI alongside designers/product owners to optimize conversion rates, translating Figma designs into pixel-perfect implementations and ensuring accurate tracking and analytics
- Migrated A/B testing platform to LaunchDarkly, enabling server-side testing and aligning experiment metrics with the Google Analytics platform
- Drove application refactor to utilize internal GraphQL endpoints, eliminating legacy APIs and reducing average calls per page by ~50%

TECHNICAL PROJECTS

IllustrAItor - Github | Deployment
A gamified drawing application that leverages AI to provide grading and feedback

- Engineered a responsive and interactive drawing interface using the HTML Canvas API, ensuring real-time rendering
- Integrated OpenAI models via Vercel AI SDK, enabling accurate evaluation on user-submitted drawings
- Designed an intuitive, engaging UI with shadcn/ui and Vercel v0, featuring AI-inspired visual elements

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, NodeJS, HTML5, CSS3
Frameworks & Libraries: ReactJS, NextJS, Tailwind CSS, GraphQL, React Router, Jest
Other Tools: Google Analytics, Contentful, LaunchDarkly, Datadog, Jira

EDUCATION

Flatiron School Austin, TX
Full Stack Software Engineering, Ruby on Rails and JavaScript program October 2021 - January 2022

Villanova University Villanova, PA
Bachelor of Science, Chemical Engineering, Summa Cum Laude May 2021
